Most Improved Golfer Computation

The following formula is used to develop the most improved golfer list:

$$\frac{(\text{Total diff at start} \times .096) + K}{(\text{Total dif at end} \times .096) + K}$$

Note: K = 12 for 18-hole services K = 6 for 9-hole services

The K value ensures that lower handicap players have a better improvement factor than higher handicap players who improve the same number of strokes.

Please note: This ranking is for guidance only and should be carefully reviewed by the handicap committee and modified if necessary. There are many special situations which cannot be taken into account by the formula alone, especially if the club joined GHIN for the first time this year. The committee always has final authority in selecting their most improved player.
